

You can see the issues we found below in the Summary of each section and on individual Step pages.

APPLICATION OVERVIEW DOCUMENT

Movie Ticket Booking Automation

Congratulations on completing your application definition! This document presents a summary overview of your application as defined in the Pega platform. It encapsulates the key elements of your application's design, highlighting its core functionalities and overall structure.

Please note that this is a high-level view and does not include granular details like data models or sample data. It's an ideal resource for a quick reference, facilitating discussions among team members and stakeholders, and for guiding strategic decisions in your application development process.

Blueprint ID: BP-2418300

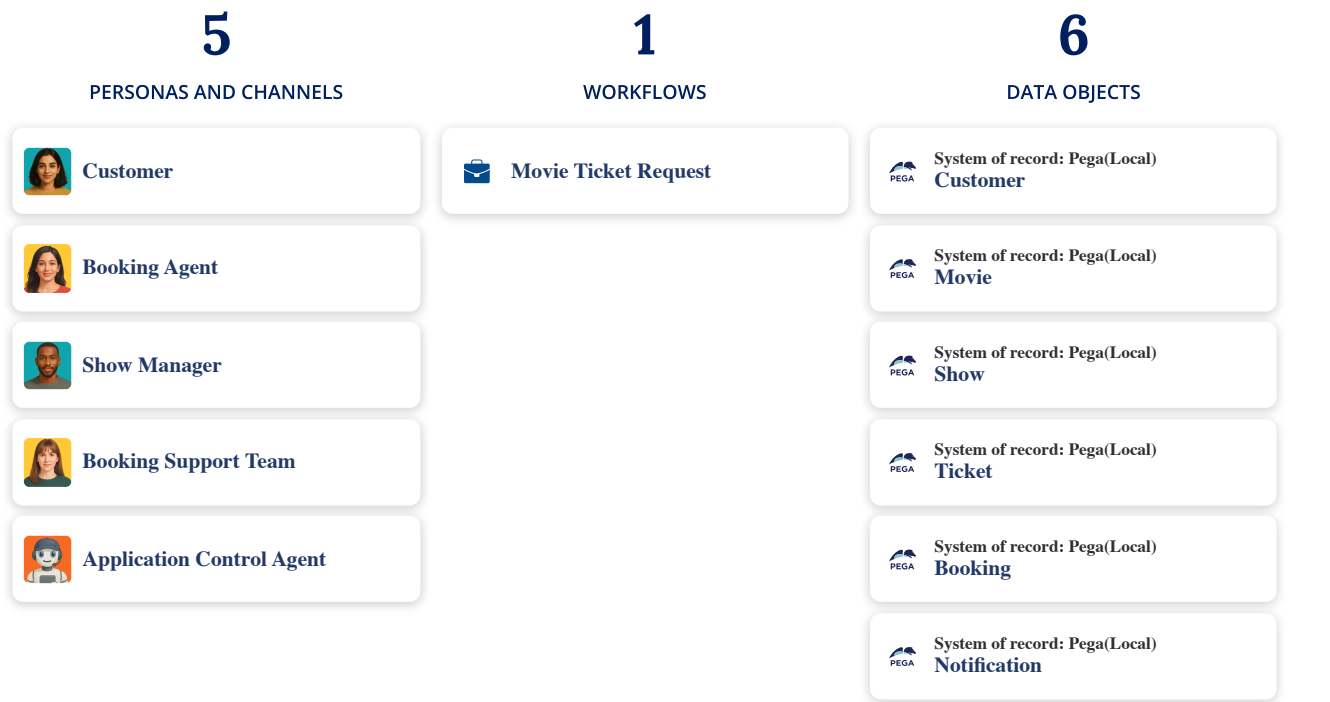

Application Context

Automates the movie ticket booking process for CineWave Entertainment, addressing inefficiencies of manual offline bookings. Enables customers to request tickets digitally, staff to manage show and seating data, and the system to validate and confirm bookings efficiently. Improves operational control by enforcing seat availability, calculating pricing, routing requests, and managing booking statuses. Enhances customer experience through timely confirmations and automated notifications, resulting in increased responsiveness, accuracy, and streamlined theatre operations across multiple locations.

Organization name	Location	Industry	Industry subsegment	Department/function	Language
Internet Service Provider	India	Consumer Services	Entertainment	Other	English

Application Architecture

Users access the application through defined channels, assume specific roles, and trigger workflows that manage how work progresses. Those workflows operate on shared Data Objects to ensure the system stays consistent and up to date.
