

CineWave: Movie Ticket Booking Automation

Application design and live preview built in Pega GenAI Blueprint | Shreyash Gote | Pega National Internship Program

Overview

CineWave Entertainment needed a digital way to handle movie ticket requests. This application models the whole booking as a single **Movie Ticket Request** case: collecting booking details, choosing the movie and show, validating seat availability, calculating pricing, getting confirmation, processing the tickets and notifying the customer.

Design at a glance

Case type	Movie Ticket Request
Lifecycle (5 stages)	Request Intake > Availability > Approval > Booking Execution > Notification
Data objects (5)	Customer, Movie, Show, Booking, Notification
Channels (8)	Employee: Occasional User, Power User, Salesforce Extender. CSR: Contact Center. Customer: Web Self Service, Conversational Self-Service. System: DxAPI. Developer: MCP Agent.
API	REST API in OpenAPI 3.0 with 4 endpoints: create, list, update by id, get by id
Tool	Pega GenAI Blueprint (design and live preview)

The following pages show the application in Blueprint's live preview. All customer, movie and booking data shown is sample data.

1. Application home

Landing page with Create New for a Movie Ticket Request and a My Open Requests list.

2. Case view and lifecycle

A Movie Ticket Request case in the 5-stage lifecycle, with the Collect Booking Info step (customer, movie, show, ticket count) and case details such as seat availability, pricing and SLA goals.

3. Salesforce Extender channel

The same Collect Booking Info step embedded inside a Salesforce Sales console for employees.

The screenshot displays a Pega Blueprint console window titled "Pega ★ Blueprint™" with an "Edit" toggle. The console is open to a "Movie Ticket Request" step. The interface is designed to look like a Salesforce console for a user named "Emily Foster".

Salesforce Console Header:

- Navigation tabs: Sales, Home, **Contacts**, Opportunities, Accounts, Leads, Cases, Files, Tasks, Campaigns.
- Search bar: Search...
- Performance metrics: EPT: 9.42 s, 9074.48 KB.
- Tools: +, ?, ⚙️, 🔔, 👤.

Contact Details (Emily Foster):

- Account Name: C-1006
- Phone: 617.555.1212
- Email: emily.foster@mail.com
- Contact Owner: John Smith
- Actions: + Follow, Edit, Delete, View Contact Hierarchy

Form Fields:

- Requesting Customer:** Amit Patel (dropdown)
- Selected Movie:** Barbie (dropdown)
- Chosen Show:** Inception Remastered (dropdown)
- Number of tickets:** 5

Buttons: Cancel, Save for later, Submit

Channel List (Right Sidebar):

- Occasional User (EMPLOYEE)
- Power User (EMPLOYEE)
- Salesforce Extender (EMPLOYEE)** (highlighted)
- Contact Center (CSR)
- Web Self Service (CUSTOMER)
- Conversational Self-Service (CUSTOMER)
- DxAPI (SYSTEM)
- MCP Agent (DEVELOPER)

4. Contact Center channel

CSR workspace showing customer context and the case form side by side.

The screenshot displays the Pega Blueprint interface for a Contact Center channel. The top header shows the Pega Blueprint logo, an 'Edit' toggle, and a dropdown menu for 'Movie Ticket Request'. The main workspace is titled 'Movie Ticket Booking Automation' and features a search bar. A customer context bar at the top lists details for 'Shreyash': Lifetime value (Platinum), Interaction goal (Nurture), Verification status (Verified), Customer tenure (10 years 2 months), and Call back (+1 761 435 7698). Below this, a prompt asks 'How may I help you today?'. The 'Cases' section shows a 'Movie Ticket Request' case with 'Wrap up' and 'Add case' buttons. The 'Collect Booking Info' section contains form fields for 'Requesting Customer' (Amit Patel), 'Selected Movie' (Barbie), 'Chosen Show' (Inception Remastered), and 'Number of tickets' (5). 'Cancel' and 'Submit' buttons are present. A summary bar at the bottom shows tabs for 'Summary', 'Customer', 'Movie', 'Show', 'Booking', and 'Notification'. The 'Customer' tab is active, displaying 'Customer display name' (Vikram Singh), 'Email address' (vikram.singh@gmail.com), and 'Mobile number' (+91-8912345678). Below the summary bar, 'Suggested Actions' (2) and 'Booking preferences' (Horror, Late-night shows, PVR cinemas) are shown, along with 'Communication opt-in' (false). On the right, a 'CHANNEL' sidebar lists various roles: Occasional User (EMPLOYEE), Power User (EMPLOYEE), Salesforce Extender (EMPLOYEE), Contact Center (CSR), Web Self Service (CUSTOMER), Conversational Self-Service (CUSTOMER), DxAPI (SYSTEM), and MCP Agent (DEVELOPER).

5. DxAPI channel

Generated REST API specification (OpenAPI 3.0) for the Movie Ticket Request case: POST, GET, PATCH and GET by id.

The screenshot displays the Pega Blueprint interface for the 'Movie Ticket Request' case. The top header includes the Pega Blueprint logo, an 'Edit' toggle, and a dropdown menu set to 'Movie Ticket Request'. The main content area features the title 'Movie Ticket Request' with version tags '3.0.1' and 'OAS 3.0'. Below the title, a description states: 'Initiates a digital movie ticket booking lifecycle for customers at CineWave Entertainment. The process covers booking details intake, show selection, seat validation, pricing calculation, customer confirmation, ticket processing, and notification. Ensures accurate, timely ticket allocation and enhances customer satisfaction.' A list of four REST API endpoints is shown, each with a method button, a path, a description, and a checkmark icon:

- POST** `/MovieTicketRequest` Create MovieTicketRequest
- GET** `/MovieTicketRequest` Get list of records for MovieTicketRequest
- PATCH** `/MovieTicketRequest/{id}` Update existing MovieTicketRequest
- GET** `/MovieTicketRequest/{id}` Get MovieTicketRequest by Id

On the right side, a 'CHANNEL' sidebar lists various user roles and systems:

- Occasional User (EMPLOYEE)
- Power User (EMPLOYEE)
- Salesforce Extender (EMPLOYEE)
- Contact Center (CSR)
- Web Self Service (CUSTOMER)
- Conversational Self-Service (CUSTOMER)
- DxAPI (SYSTEM)** (highlighted)
- MCP Agent (DEVELOPER)
